EXAM II

Monday, March 3, 2008

- I. (6 points) _____
- II. (8 points) _____
- III. (8 points) _____
- IV. (8 points) _____
- V. (30 points) _____
- VI. (15 points) _____
- VII. (15 points) _____
- VIII. (12 points) _____

TOTAL(100 points \pm 2 pts) _____

I. (6 pts.) Classify each of the following reactions as:

a) addition

b) elimination

c) substitution

d) rearrangement

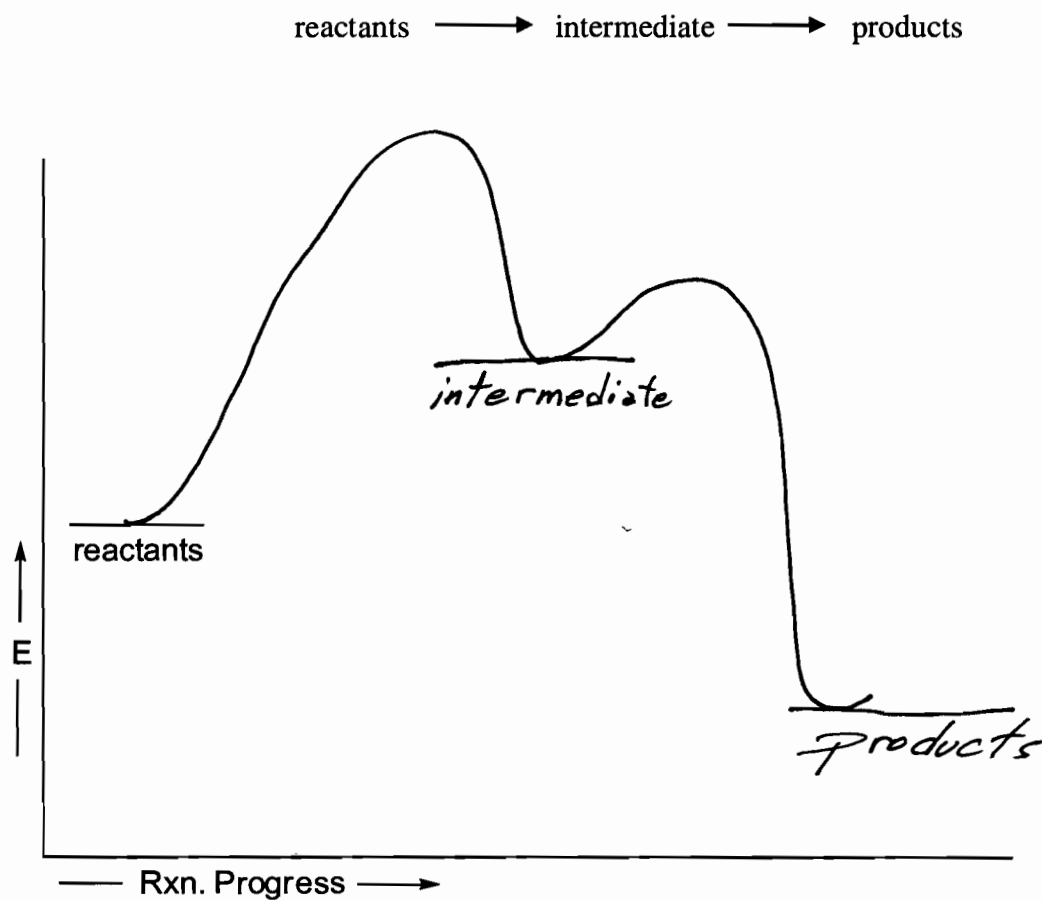

by placing the letter corresponding to the correct answer in the blank space provided.

II. (8 pts.) Add curved arrows to indicate the flow of electrons and identify the nucleophile (w/N) and electrophile (w/E) for the reagents on the left side of both equations.

- III. (8 pts.) Draw a qualitative energy diagram for a 2-step reaction in which (1) the first step is the slowest, (2) formation of the intermediate is endergonic but (3) the overall reaction is exergonic.

- IV. (8 pts.) A compound w/ the molecular formula of $C_7H_{10}O$ takes up 2 mol equivalents of H_2 upon catalytic hydrogenation. Provide a reasonable structure for this compound.

any legitimate structure with a ring and two elements of unsaturation.

V. (30pts.) Complete the following reactions w/the expected major products.

VI. (15 pts.) Over (and/or under) the reaction arrows provide the reagents necessary to carry out the following reactions.

VII. (15 pts.) Provide correct and complete names for the following compounds.

VIII. (12 pts.) Using acetylene (ethyne) and any necessary alkyl halides as starting materials show how you would perform the following syntheses. Include all reagents for each synthetic step.
